

ArthroSave

joint reviving medical treatment

Pilot

Toepassing van de KneeReviver
in 5 Nederlandse ziekenhuizen

CONFIDENTIAL

Market opportunity

Today patients with severe knee osteoarthritis are treated with replacement of the knee joint by a knee prosthesis.

Due to a limited lifespan of the prosthesis it results in replacement surgery which is complex, expensive and less effective.

Market opportunity

ArthroSave regenerates the damaged knee joint and postpones a first knee prosthesis for at least 5-10 years and so we are reducing the chance for replacement surgery.

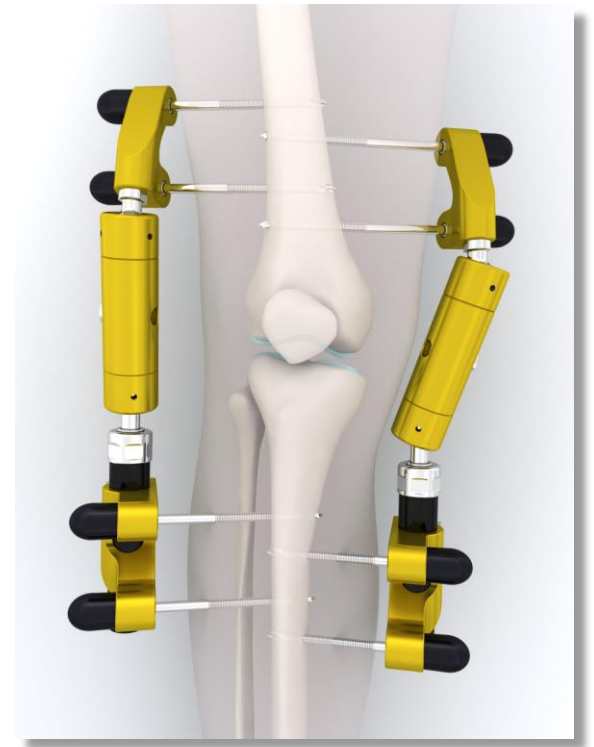

We have demonstrated cartilage repair in peer reviewed publications.

KneeReviver

The knee distraction procedure consists of:

- 2-3 days in hospital
- 6 weeks walking with stiff knee
- removal of KneeReviver at day treatment

KneeReviver

Dedicated developed
for knee distraction:

Safe and comfortable
for the patient

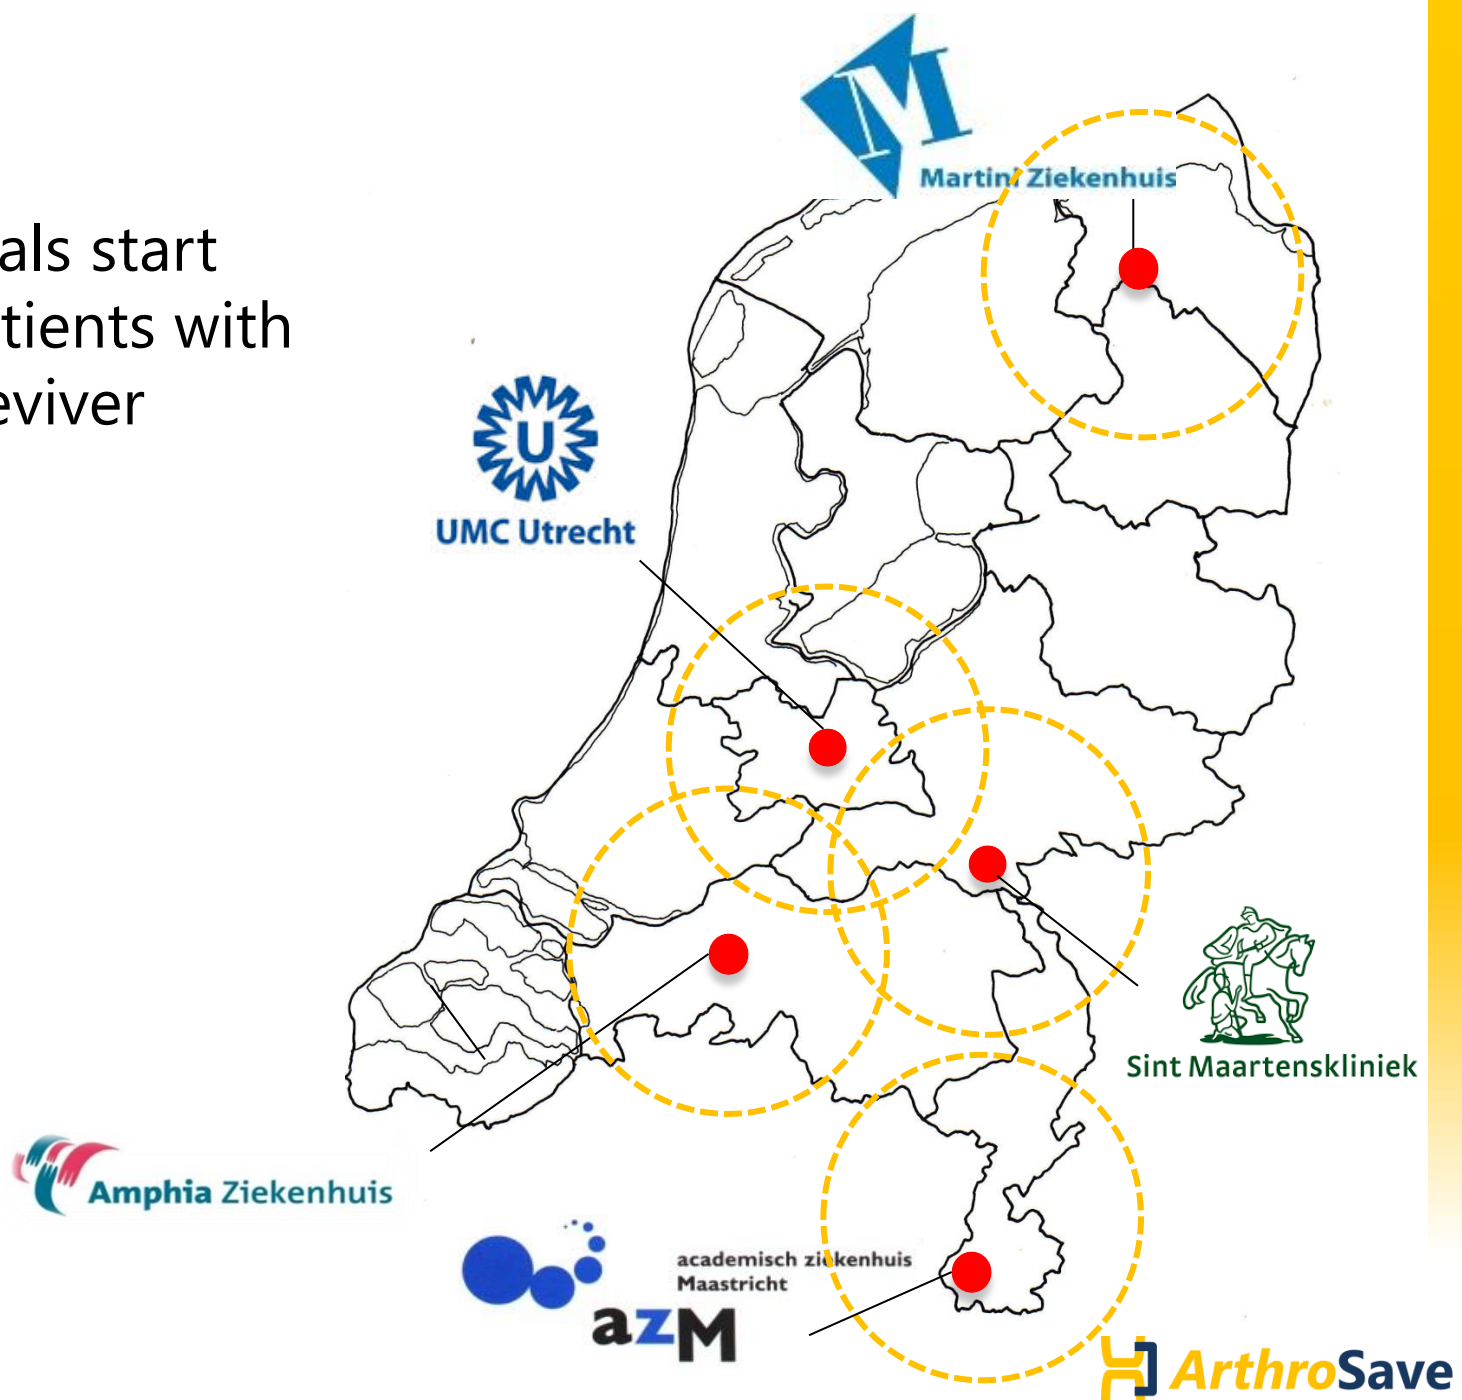

Easy and fast
for the surgeon

Safe and ready
for the hospital

Pilot

Five hospitals start treating patients with the KneeReviver

ArthroSave

joint reviving medical treatment

**Saves your own knee and
reduces healthcare costs**
